Nueva versión de Apache (1.3.17) y configuración Bulma (9526 lectures)

 Per **Ricardo Galli Granada**, *gallir* (http://mnm.uib.es/gallir/)
Creado el 30/01/2001 00:00 modificado el 30/01/2001 00:00

Ya ha salido la última versión[1] *del Apache que soluciona algunos problemas y mejora el funcionamiento con el 2.2.x. Adjunto los cambios y el* `config.status` *del Apache de Bulma que hace que el* `make install` *instale los ficheros en los directorios correctos sobre una RedHat. [ACTUALIZADO] Agregado opciones del configure para compilar PHP tal como está en bulma.net*

Cambios

```
        Apache 1.3.17 Major changes

  The bug fixes are:
    * Correct handling of request byte ranges as specified by RFC 2616.
    * Restore functionality broken by the mod_rewrite security fix:
      rewrite map lookup keys and default values are now expanded
      so that the lookup can depend on the requested URI etc.
    * PHP now works under Unixware 7.
    * Eliminate caching problems of mod_autoindex results.
    * Win32 CGI execution on all Windows platforms is corrected.
    * NetWare file and path fixes.

  The main new features include:
    * Add a new LogFormat directive, %c.
    * mod_status now respects ?refresh=n of 1 or greater.
    * mod_autoindex fixes browser caching by sending LastModified
      and ETag headers if IndexOptions TrackModified is enabled.

  Selected new features that relate to Windows platforms:
    * Complete handling of ScriptInterpreterSource Registry execution.
    * NT and 2000 services can be started with -D FOO style options.
    * The close console window button/menu option on 95 and 98 works.

  Selected new features relating to other platforms:
    * Better discovery of dbm_open() under Linux.
    * Linux 2.2.x and later do not need a serialised single listener.
```

config.status del 1.3.17 de Bulma

```
#!/bin/sh
##
##  config.status -- APACI auto-generated configuration restore script
##
##  Use this shell script to re-run the APACI configure script for
##  restoring your configuration. Additional parameters can be supplied.
##

OPTIM="-O2" \
./configure \
"--with-layout=Apache" \
"--enable-module=so" \
"--sbindir=/usr/sbin" \
"--sysconfdir=/etc/httpd/conf" \
"--libexecdir=/usr/lib/apache" \
"--prefix=/home/httpd" \
```

```
"--mandir=/usr/man" \
"--includedir=/usr/include/apache" \
"--logfiledir=/var/log/httpd" \
"--enable-module=rewrite" \
"--enable-shared=rewrite" \
"--enable-module=log_agent" \
"--enable-shared=log_agent" \
"--enable-module=expires" \
"--enable-shared=expires" \
"--enable-module=log_referer" \
"--enable-shared=log_referer" \
"--enable-module=auth_db" \
"--enable-shared=auth_db" \
"--enable-module=auth_dbm" \
"--enable-shared=auth_dbm" \
"--enable-module=mime_magic" \
"--enable-shared=mime_magic" \
"--enable-shared=alias" \
"$@"
```

Configuración PHP

```
./configure --with-gd \
            --with-mysql \
            --with-apxs \
            --with-pgsql \
            --enable-track-vars
```
